Chapter 3 Technology Application Projects

**Mathematica/Maple Module**

*Convergence of Secant Slopes to the Derivative Function*

You will visualize the secant line between successive points on a curve and observe what happens as the distance between them becomes small. The function, sample points, and secant lines are plotted on a single graph, while a second graph compares the slopes of the secant lines with the derivative function.

**Mathematica/Maple Module**

*Derivatives, Slopes, Tangent Lines, and Making Movies*

**Parts I–III.** You will visualize the derivative at a point, the linearization of a function, and the derivative of a function. You learn how to plot the function and selected tangents on the same graph.

**Part IV (Plotting Many Tangents)**

**Part V (Making Movies).** Parts IV and V of the module can be used to animate tangent lines as one moves along the graph of a function.

**Mathematica/Maple Module**

*Convergence of Secant Slopes to the Derivative Function*

You will visualize right-hand and left-hand derivatives.

**Mathematica/Maple Module**

*Motion Along a Straight Line: Position → Velocity → Acceleration*

Observe dramatic animated visualizations of the derivative relations among the position, velocity, and acceleration functions. Figures in the text can be animated.
